

# R2C-B TUBING HANGERS

The Great North Wellhead & Frac (GNWF) “R2C” (no B.P.V.), and “R2C-B” (c/w H.B.P.V.) are threaded single completion tubing hangers that can include down-hole control line preparation(s). The hanger’s annular seal is activated by compression, which is energized by engaging the full bank of lockdown screws in the tubing head. The “R2C”, “R2C-B” compression seal type tubing hangers are offered for the 7” bore size only.

The “R2C” and “R2C-B” tubing hangers can be supplied with box tubing thread sizes up to and including 3 ½” External Upset Ends (E.U.E.), 4 ½” Long Casing (L.G.C.S.G), as well as many premium threads the customer may require.
